

15024-xxxx & 4-15020-x

Installation Instructions

1. With Transmission out of the vehicle, remove stock release components from the transmission. (Fork, slave, bearing, etc.)
2. Remove the factory bearing guide tube from the input shaft of the transmission by removing the 4 retaining bolts
3. Prep the concentric slave cylinder by attaching the brass fittings using a thread sealing compound
4. Making sure the both mounting flanges are clean; install the concentric slave cylinder to the transmission using the supplied adapter and bolts.
5. Attach Hydraulic lines to the concentric slave cylinder, making sure to install the bleeder line into the top port.*NOTE* On some transmission castings it may be necessary to put a very slight bend in the lower line to clear the bell housing.
6. With the transmission back in the car, route the lines away from any moving parts or heat sources
7. Attach the replacement line to the master cylinder using the provided adapter fitting
8. Bleed the system and verify proper clutch release
